## **NUMERICAL CALCULATION METHODS CONCRETE BEAMS WITH REINFORCEMENT CARRIED OFF**

*The examples of the creation calculation schemes in the program complex SCAD for the class of of designs with an external workers reinforcement are developed. The stress fields  $N_x$ ,  $N_y$ ,  $\tau_{xy}$ , moving items and detected character of work of the proposed design are obtained. The comparisons of the numerical and experimental studies are fulfilled.*

**Keywords:** *numerical calculations, beam, rendered reinforcement.*
